How Government Can Move Beyond Being Data Rich, But Information Poor

While there are examples of shifts in data collation and analytics across the public sector, there's still a ways to go before federal, state, and local governments become both data and information rich.

New eBook Sheds Light on How Government is Overcoming Persistent Big Data Challenges

How can the public sector overcome data integration challenges like evolving data, aging technology, and capital? That's the topic of our latest eBook, written in collaboration with Hortonworks.

Data Science is Key to Readying Facial Recognition Software for Use by Law Enforcement

The use of facial recognition software in law enforcement currently raises more questions than answers. Yet, even as civil rights groups and the courts hash out the legal arguments, today's increasingly challenging policing environment indicates the technology is here to stay.
